LED LCD TV

SERVICE MANUAL

CHASSIS : LD22E

MODEL: 32LM660S/660T/669S/669T

32LM660S/660T-ZA 32LM669S/669T-ZC

CAUTION

BEFORE SERVICING THE CHASSIS,
READ THE SAFETY PRECAUTIONS IN THIS MANUAL.

SAFETY PRECAUTIONS

IMPORTANT SAFETY NOTICE

Many electrical and mechanical parts in this chassis have special safety-related characteristics. These parts are identified by \triangle in the Schematic Diagram and Exploded View.

It is essential that these special safety parts should be replaced with the same components as recommended in this manual to prevent Shock, Fire, or other Hazards.

Do not modify the original design without permission of manufacturer.

General Guidance

An **isolation Transformer should always be used** during the servicing of a receiver whose chassis is not isolated from the AC power line. Use a transformer of adequate power rating as this protects the technician from accidents resulting in personal injury from electrical shocks.

It will also protect the receiver and its components from being damaged by accidental shorts of the circuitry that may be inadvertently introduced during the service operation.

If any fuse (or Fusible Resistor) in this TV receiver is blown, replace it with the specified.

When replacing a high wattage resistor (Oxide Metal Film Resistor, over 1 W), keep the resistor 10 mm away from PCB.

Keep wires away from high voltage or high temperature parts.

Before returning the receiver to the customer,

always perform an **AC leakage current check** on the exposed metallic parts of the cabinet, such as antennas, terminals, etc., to be sure the set is safe to operate without damage of electrical shock.

Leakage Current Cold Check(Antenna Cold Check)

With the instrument AC plug removed from AC source, connect an electrical jumper across the two AC plug prongs. Place the AC switch in the on position, connect one lead of ohm-meter to the AC plug prongs tied together and touch other ohm-meter lead in turn to each exposed metallic parts such as antenna terminals, phone jacks, etc.

If the exposed metallic part has a return path to the chassis, the measured resistance should be between 1 M Ω and 5.2 M Ω .

When the exposed metal has no return path to the chassis the reading must be infinite.

An other abnormality exists that must be corrected before the receiver is returned to the customer.

Leakage Current Hot Check (See below Figure)

Plug the AC cord directly into the AC outlet.

Do not use a line Isolation Transformer during this check.

Connect 1.5 K / 10 watt resistor in parallel with a 0.15 μ F capacitor between a known good earth ground (Water Pipe, Conduit, etc.) and the exposed metallic parts.

Measure the AC voltage across the resistor using AC voltmeter with 1000 ohms/volt or more sensitivity.

Reverse plug the AC cord into the AC outlet and repeat AC voltage measurements for each exposed metallic part. Any voltage measured must not exceed 0.75 volt RMS which corresponds to 0.5 mA.

In case any measurement is out of the limits specified, there is possibility of shock hazard and the set must be checked and repaired before it is returned to the customer.

Leakage Current Hot Check circuit

When 25A is impressed between Earth and 2nd Ground for 1 second, Resistance must be less than 0.1 Ω

*Base on Adjustment standard

SERVICING PRECAUTIONS

CAUTION: Before servicing receivers covered by this service manual and its supplements and addenda, read and follow the **SAFETY PRECAUTIONS** on page 3 of this publication.
NOTE: If unforeseen circumstances create conflict between the following servicing precautions and any of the safety precautions on page 3 of this publication, always follow the safety precautions. Remember: Safety First.

General Servicing Precautions

1. Always unplug the receiver AC power cord from the AC power source before;
 - a. Removing or reinstalling any component, circuit board module or any other receiver assembly.
 - b. Disconnecting or reconnecting any receiver electrical plug or other electrical connection.
 - c. Connecting a test substitute in parallel with an electrolytic capacitor in the receiver.**CAUTION:** A wrong part substitution or incorrect polarity installation of electrolytic capacitors may result in an explosion hazard.
2. Test high voltage only by measuring it with an appropriate high voltage meter or other voltage measuring device (DVM, FETVOM, etc) equipped with a suitable high voltage probe. Do not test high voltage by "drawing an arc".
3. Do not spray chemicals on or near this receiver or any of its assemblies.
4. Unless specified otherwise in this service manual, clean electrical contacts only by applying the following mixture to the contacts with a pipe cleaner, cotton-tipped stick or comparable non-abrasive applicator; 10 % (by volume) Acetone and 90 % (by volume) isopropyl alcohol (90 % - 99 % strength)
CAUTION: This is a flammable mixture.
Unless specified otherwise in this service manual, lubrication of contacts is not required.
5. Do not defeat any plug/socket B+ voltage interlocks with which receivers covered by this service manual might be equipped.
6. Do not apply AC power to this instrument and/or any of its electrical assemblies unless all solid-state device heat sinks are correctly installed.
7. Always connect the test receiver ground lead to the receiver chassis ground before connecting the test receiver positive lead.
Always remove the test receiver ground lead last.
8. Use with this receiver only the test fixtures specified in this service manual.
CAUTION: Do not connect the test fixture ground strap to any heat sink in this receiver.

Electrostatically Sensitive (ES) Devices

Some semiconductor (solid-state) devices can be damaged easily by static electricity. Such components commonly are called Electrostatically Sensitive (ES) Devices. Examples of typical ES devices are integrated circuits and some field-effect transistors and semiconductor "chip" components. The following techniques should be used to help reduce the incidence of component damage caused by static by static electricity.

1. Immediately before handling any semiconductor component or semiconductor-equipped assembly, drain off any electrostatic charge on your body by touching a known earth ground. Alternatively, obtain and wear a commercially available discharging wrist strap device, which should be removed to prevent potential shock reasons prior to applying power to the unit under test.

2. After removing an electrical assembly equipped with ES devices, place the assembly on a conductive surface such as aluminum foil, to prevent electrostatic charge buildup or exposure of the assembly.
3. Use only a grounded-tip soldering iron to solder or unsolder ES devices.
4. Use only an anti-static type solder removal device. Some solder removal devices not classified as "anti-static" can generate electrical charges sufficient to damage ES devices.
5. Do not use freon-propelled chemicals. These can generate electrical charges sufficient to damage ES devices.
6. Do not remove a replacement ES device from its protective package until immediately before you are ready to install it. (Most replacement ES devices are packaged with leads electrically shorted together by conductive foam, aluminum foil or comparable conductive material).
7. Immediately before removing the protective material from the leads of a replacement ES device, touch the protective material to the chassis or circuit assembly into which the device will be installed.
CAUTION: Be sure no power is applied to the chassis or circuit, and observe all other safety precautions.
8. Minimize bodily motions when handling unpackaged replacement ES devices. (Otherwise harmless motion such as the brushing together of your clothes fabric or the lifting of your foot from a carpeted floor can generate static electricity sufficient to damage an ES device.)

General Soldering Guidelines

1. Use a grounded-tip, low-wattage soldering iron and appropriate tip size and shape that will maintain tip temperature within the range of 500 °F to 600 °F.
2. Use an appropriate gauge of RMA resin-core solder composed of 60 parts tin/40 parts lead.
3. Keep the soldering iron tip clean and well tinned.
4. Thoroughly clean the surfaces to be soldered. Use a mall wire-bristle (0.5 inch, or 1.25 cm) brush with a metal handle. Do not use freon-propelled spray-on cleaners.
5. Use the following unsoldering technique
 - a. Allow the soldering iron tip to reach normal temperature. (500 °F to 600 °F)
 - b. Heat the component lead until the solder melts.
 - c. Quickly draw the melted solder with an anti-static, suction-type solder removal device or with solder braid.
CAUTION: Work quickly to avoid overheating the circuit board printed foil.
6. Use the following soldering technique.
 - a. Allow the soldering iron tip to reach a normal temperature (500 °F to 600 °F)
 - b. First, hold the soldering iron tip and solder the strand against the component lead until the solder melts.
 - c. Quickly move the soldering iron tip to the junction of the component lead and the printed circuit foil, and hold it there only until the solder flows onto and around both the component lead and the foil.
CAUTION: Work quickly to avoid overheating the circuit board printed foil.
 - d. Closely inspect the solder area and remove any excess or splashed solder with a small wire-bristle brush.

IC Remove/Replacement

Some chassis circuit boards have slotted holes (oblong) through which the IC leads are inserted and then bent flat against the circuit foil. When holes are the slotted type, the following technique should be used to remove and replace the IC. When working with boards using the familiar round hole, use the standard technique as outlined in paragraphs 5 and 6 above.

Removal

1. Desolder and straighten each IC lead in one operation by gently prying up on the lead with the soldering iron tip as the solder melts.
2. Draw away the melted solder with an anti-static suction-type solder removal device (or with solder braid) before removing the IC.

Replacement

1. Carefully insert the replacement IC in the circuit board.
2. Carefully bend each IC lead against the circuit foil pad and solder it.
3. Clean the soldered areas with a small wire-bristle brush. (It is not necessary to reapply acrylic coating to the areas).

"Small-Signal" Discrete Transistor

Removal/Replacement

1. Remove the defective transistor by clipping its leads as close as possible to the component body.
2. Bend into a "U" shape the end of each of three leads remaining on the circuit board.
3. Bend into a "U" shape the replacement transistor leads.
4. Connect the replacement transistor leads to the corresponding leads extending from the circuit board and crimp the "U" with long nose pliers to insure metal to metal contact then solder each connection.

Power Output, Transistor Device

Removal/Replacement

1. Heat and remove all solder from around the transistor leads.
2. Remove the heat sink mounting screw (if so equipped).
3. Carefully remove the transistor from the heat sink of the circuit board.
4. Insert new transistor in the circuit board.
5. Solder each transistor lead, and clip off excess lead.
6. Replace heat sink.

Diode Removal/Replacement

1. Remove defective diode by clipping its leads as close as possible to diode body.
2. Bend the two remaining leads perpendicular y to the circuit board.
3. Observing diode polarity, wrap each lead of the new diode around the corresponding lead on the circuit board.
4. Securely crimp each connection and solder it.
5. Inspect (on the circuit board copper side) the solder joints of the two "original" leads. If they are not shiny, reheat them and if necessary, apply additional solder.

Fuse and Conventional Resistor

Removal/Replacement

1. Clip each fuse or resistor lead at top of the circuit board hollow stake.
2. Securely crimp the leads of replacement component around notch at stake top.

3. Solder the connections.

CAUTION: Maintain original spacing between the replaced component and adjacent components and the circuit board to prevent excessive component temperatures.

Circuit Board Foil Repair

Excessive heat applied to the copper foil of any printed circuit board will weaken the adhesive that bonds the foil to the circuit board causing the foil to separate from or "lift-off" the board. The following guidelines and procedures should be followed whenever this condition is encountered.

At IC Connections

To repair a defective copper pattern at IC connections use the following procedure to install a jumper wire on the copper pattern side of the circuit board. (Use this technique only on IC connections).

1. Carefully remove the damaged copper pattern with a sharp knife. (Remove only as much copper as absolutely necessary).
2. Carefully scratch away the solder resist and acrylic coating (if used) from the end of the remaining copper pattern.
3. Bend a small "U" in one end of a small gauge jumper wire and carefully crimp it around the IC pin. Solder the IC connection.
4. Route the jumper wire along the path of the out-away copper pattern and let it overlap the previously scraped end of the good copper pattern. Solder the overlapped area and clip off any excess jumper wire.

At Other Connections

Use the following technique to repair the defective copper pattern at connections other than IC Pins. This technique involves the installation of a jumper wire on the component side of the circuit board.

1. Remove the defective copper pattern with a sharp knife. Remove at least 1/4 inch of copper, to ensure that a hazardous condition will not exist if the jumper wire opens.
2. Trace along the copper pattern from both sides of the pattern break and locate the nearest component that is directly connected to the affected copper pattern.
3. Connect insulated 20-gauge jumper wire from the lead of the nearest component on one side of the pattern break to the lead of the nearest component on the other side.

Carefully crimp and solder the connections.

CAUTION: Be sure the insulated jumper wire is dressed so the it does not touch components or sharp edges.

SPECIFICATION

NOTE : Specifications and others are subject to change without notice for improvement.

1. Application range

This specification is applied to the LCD TV used LD22E chassis.

2. Requirement for Test

Each part is tested as below without special appointment.

- 1) Temperature: 25 °C ± 5 °C(77 °F ± 9 °F), CST: 40 °C ± 5 °C
- 2) Relative Humidity: 65 % ± 10 %
- 3) Power Voltage
 - : Standard input voltage (AC 100-240 V~, 50/60 Hz)
 - * Standard Voltage of each products is marked by models.
- 4) Specification and performance of each parts are followed each drawing and specification by part number in accordance with BOM.
- 5) The receiver must be operated for about 20 minutes prior to the adjustment.

3. Test method

- 1) Performance: LGE TV test method followed
- 2) Demanded other specification
 - Safety : CE, IEC specification
 - EMC : CE, IEC
 - Wireless : Wireless HD Specification (Option)

4. Model General Specification

| 9 | 1920 x 1080 @60Hz | 67.5 | 60.00 | WUXGA(Reduced Blanking)) |

ADJUSTMENT INSTRUCTION

1. Application Range

This specification sheet is applied to all of the LED LCD TV with LD22E chassis.

2. Designation

- (1) Because this is not a hot chassis, it is not necessary to use an isolation transformer. However, the use of isolation transformer will help protect test instrument.
- (2) Adjustment must be done in the correct order.
- (3) The adjustment must be performed in the circumstance of $25^{\circ}\text{C} \pm 5^{\circ}\text{C}$ of temperature and $65\% \pm 10\%$ of relative humidity if there is no specific designation.
- (4) The input voltage of the receiver must keep AC 100-240 V~, 50/60 Hz.
- (5) The receiver must be operated for about 5 minutes prior to the adjustment when module is in the circumstance of over 15.

In case of keeping module is in the circumstance of 0°C , it should be placed in the circumstance of above 15°C for 2 hours.

In case of keeping module is in the circumstance of below -20°C , it should be placed in the circumstance of above 15°C for 3 hours.

[Caution]

When still image is displayed for a period of 20 minutes or longer (Especially where W/B scale is strong. Digital pattern 13ch and/or Cross hatch pattern 09ch), there can some afterimage in the black level area.

3. Automatic Adjustment

3.1. ADC Adjustment

3.1.1. Overview

ADC adjustment is needed to find the optimum black level and gain in Analog-to-Digital device and to compensate RGB deviation.

3.1.2. Equipment & Condition

- (1) USB to RS-232C Jig
- (2) MSPG-925 Series Pattern Generator(MSPG-925FA, pattern - 65)
 - Resolution : 1080P Comp1
1920*1080 RGB
 - Pattern : Horizontal 100% Color Bar Pattern
 - Pattern level : 0.7 ± 0.1 Vp-p
 - Image

3.1.3. Adjustment

(1) Adjustment method

- Don't need to adjust ADC because there is data in OTP and adjusted initially.
- Check ADC adjustment
 - 1) Press In start key on the Adj. Remote Control, then Adjust ADC(OTP) status is displayed on "1.Adjustment check". Select "2.ADC Data", then ADC data is displayed.
 - 2) Press Adj. key on the Adjustmetn Remote Control, and select "9.ADC Calibration". Set up the ADC Type to OTP, then Select [Start] button by pressing Enter key, Component and RGB are Writed and display Success or NG.

(2) Adj. protocol

| Protocol | Command | Set ACK |
|--------------------|--------------------|---|
| Enter adj. mode | aa 00 00 | a 00 OK00x |
| Source change | xb 00 04 | b 00 OK04x (Adjust 480i, 1080p Comp1) |
| | xb 00 06 | b 00 OK06x (Adjust 1920*1080 RGB) |
| Begin adj. | ad 00 10 | |
| Return adj. result | | OKx (Case of Success) NGx (Case of Fail) |
| Read adj. data | (main) ad 00 20 | (main) 0000000000000000000000007c007b006dx |
| | (sub) ad 00 21 | (Sub) 0000000700000000000000007c00830077x |
| Confirm adj. | ad 00 99 | NG 03 00x (Fail) NG 03 01x (Fail) NG 03 02x (Fail) OK 03 03x (Success) |
| End adj. | aa 00 90 | a 00 OK90x |

Ref.) ADC Adj. RS232C Protocol_Ver1.0

(3) Adj. order

- aa 00 00 [Enter ADC adj. mode]
- xb 00 04 [Change input source to Component1 (480i& 1080p)]
- ad 00 10 [Adjust 480i&1080p Comp1]
- xb 00 06 [Change input source to RGB(1024*768)]
- ad 00 10 [Adjust 1920*1080 RGB]
- ad 00 90 End adj.

3.2. MAC address D/L, CI+ key D/L, Widevine key D/L, ESN D/L

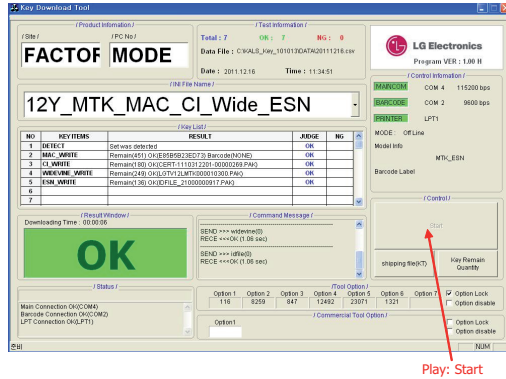

Connect: USB port

Communication Prot connection

- Com 1,2,3,4 and 115200(Baudrate)

Mode check: Online Only

- Check the test process: DETECT -> MAC -> CI -> Widevine -> ESN
- Play: START
- Result: Ready, Test, OK or NG
- Printer Out (MAC Address Label)

Red: Start

3.3.3. WIDEVINE key Inspection

- Confirm key input data at the "IN START" MENU Mode.

3.4. LAN PORT INSPECTION(PING TEST)

Connect SET → LAN port == PC → LAN Port

3.4.1. Equipment setting

- Play the LAN Port Test PROGRAM.
- Input IP set up for an inspection to Test Program.
*IP Number : 12.12.2.2

3.4.2. LAN PORT inspection(PING TEST)

- Play the LAN Port Test Program.
- Connect each other LAN Port Jack.
- Play Test (F9) button and confirm OK Message.
- Remove LAN cable.

3.3. LAN

3.3.1. Equipment & Condition

- Each other connection to LAN Port of IP Hub and Jig

3.3.2. LAN inspection solution

- LAN Port connection with PCB
- Network setting at MENU Mode of TV
- Setting automatic IP
- Setting state confirmation
→ If automatic setting is finished, you confirm IP and MAC Address.

3.5. Model name & Serial number Download

3.5.1. Model name & Serial number D/L

- Press "Power on" key of service remote control.
(Baud rate : 115200 bps)
- Connect RS232 Signal Cable to RS-232 Jack.
- Write Serial number by use RS-232.
- Must check the serial number at Instart menu.

3.5.2. Method & notice

- (1) Serial number D/L is using of scan equipment.
- (2) Setting of scan equipment operated by Manufacturing Technology Group.
- (3) Serial number D/L must be conformed when it is produced in production line, because serial number D/L is mandatory by D-book 4.0

* Manual Download (Model Name and Serial Number)
If the TV set is downloaded by OTA or service man, sometimes model name or serial number is initialized.(Not always)
It is impossible to download by bar code scan, so It need Manual download.

- 1) Press the "Instart" key of Adjustment remote control.
- 2) Go to the menu "5.Model Number D/L" like below photo.
- 3) Input the Factory model name(ex 47LM760S-ZB-A) or Serial number like photo.

- 4) Check the model name Instart menu. → Factory name displayed. (ex 47LM760S-ZB)
- 5) Check the Diagnostics.(DTV country only) → Buyer model displayed. (ex 47LM760S-ZB)

3.6. CI+ Key checking method

- Check the Section 3.2
- Check whether the key was downloaded or not at 'In Start' menu. (Refer to below).

=> Check the Download to CI+ Key value in LGset.

3.6.1. Check the method of CI+ Key value

- (1) Check the method on Instart menu
- (2) Check the method of RS232C Command

1) Into the main ass'y mode(RS232: aa 00 00)

| CMD 1 | CMD 2 | Data 0 |
|-------|-------|--------|
| A | A | 0 0 |

- 2) Check the key download for transmitted command (RS232: ci 00 10)

| CMD 1 | CMD 2 | Data 0 |
|-------|-------|--------|
| C | I | 1 0 |

- 3) Result value

- Normally status for download : OKx
- Abnormally status for download : NGx

3.6.2. Check the method of CI+ key value(RS232)

- 1) Into the main ass'y mode(RS232: aa 00 00)

| CMD 1 | CMD 2 | Data 0 |
|-------|-------|--------|
| A | A | 0 0 |

- 2) Check the mothod of CI+ key by command (RS232: ci 00 20)

| CMD 1 | CMD 2 | Data 0 |
|-------|-------|--------|
| C | I | 2 0 |

- 3) Result value

i 01 OK 1d1852d21c1ed5dcx

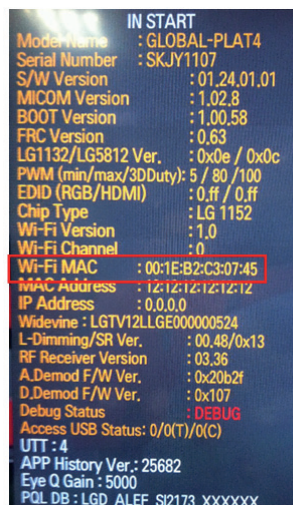

→ CI+ Key Value

3.7. WIFI MAC ADDRESS CHECK

- (1) Using RS232

| | H-freq(kHz) | V-freq.(Hz) |
|--------------|------------------------|-------------------|
| Transmission | [A][I][Set ID][20][Cr] | [O][K][X] or [NG] |

- (2) Check the menu on in-start.

4. Manual Adjustment

* ADC adjustment is not needed because of OTP(Auto ADC adjustment)

4.1 EDID(The Extended Display Identification Data)/DDC(Display Data Channel) download

4.1.1. Overview

It is a VESA regulation. A PC or a MNT will display an optimal resolution through information sharing without any necessity of user input. It is a realization of "Plug and Play".

4.1.2. Equipment

- Since embedded EDID data is used, EDID download JIG, HDMI cable and D-sub cable are not need.
- Adjustment remote control

4.1.3. Download method

- (1) Press "ADJ" key on the Adjustment remote control then select "10.EDID D/L", By pressing "Enter" key, enter EDID D/L menu.
- (2) Select "Start" button by pressing "Enter" key, HDMI1/ HDMI2/ HDMI3/ HDMI4/ RGB are writing and display OK or NG.

| For Analog | For HDMI EDID |
|--|---|
| D-sub to D-sub | DVI-D to HDMI or HDMI to HDMI |
|  |   |

4.1.4. EDID DATA

(1) 3D EDID DATA

| HDMI_EDID DATA_3D | | | | | | | | | | | | | | | |
|-------------------|------|------|------|------|------|------|------|------|------|------|------|------|------|------|------|

| 0C | 2C | 45 | 00 | A0 | 5A | 00 | 00 | 00 | 1E | 01 | 1D | 80 | 18 | 71 | 1C |
| 0D | 20 | 58 | 2C | 25 | 00 | A0 | 5A | 00 | 00 | 9E | 01 | 1D | 00 | 72 | 51 |
| 0E | D0 | 1E | 20 | 6E | 28 | 55 | 00 | A0 | 5A | 00 | 00 | 00 | 1E | 00 | 00 |
| 0F | 00 | 00 | 00 | 00 | 00 | 00 | 00 | 00 | 00 | 00 | 00 | 00 | 00 | 00 | 00 |

Reference

- HDMI1 ~ HDMI4 / RGB
- In the data of EDID, bellows may be different by S/W or Input mode.

a. Product ID

| HEX | EDID Table | DDC Function |
|------|------------|----------------|
| 0001 | 01 00 | Analog/Digital |

b. Serial No: Controlled on production line.

c. Month, Year: Controlled on production line:

ex) Week : '01' -> '01'

Year : '2012' -> '16' fix

d. Model Name(Hex): LGTV

| Chassis | MODEL NAME(HEX) |
|---------|--|
| LD22E | 00 00 00 FC 00 4C 47 20 54 56 0A 20 20 20 20 20 20 |

e. Checksum: Changeable by total EDID data.

| | e1 | e2 10 bit/ XvYcc | e2 8 bit/ XvYcc | e2 10 bit/ none XvYcc | e2 8 bit/ none XvYcc | e3 |
|-------|----|------------------------|-----------------------|-----------------------------|----------------------------|----|
| HDMI1 | 43 | 11 | 49 | 15 | 4D | X |
| HDMI2 | 43 | 01 | 39 | 05 | 3D | X |
| HDMI3 | 43 | F1 | 29 | F5 | 2D | X |
| HDMI4 | 43 | E1 | 19 | E5 | 1D | X |
| RGB | X | X | X | X | X | 5C |

f. Vendor Specific(HDMI)

1) Deep color (module 10bit)

| INPUT | MODEL NAME(HEX) |
|-------|--|
| HDMI1 | 78 03 0C 00 10 00 B8 2D 20 C0 0E 01 4F 3F FC 08 10 18 10 06 10 16 10 28 10 |
| HDMI2 | 78 03 0C 00 20 00 B8 2D 20 C0 0E 01 4F 3F FC 08 10 18 10 06 10 16 10 28 10 |
| HDMI3 | 78 03 0C 00 30 00 B8 2D 20 C0 0E 01 4F 3F FC 08 10 18 10 06 10 16 10 28 10 |
| HDMI4 | 78 03 0C 00 40 00 B8 2D 20 C0 0E 01 4F 3F FC 08 10 18 10 06 10 16 10 28 10 |

2) None deep color (module 8bit)

| INPUT | MODEL NAME(HEX) |
|-------|--|
| HDMI1 | 78 03 0C 00 10 00 80 2D 20 C0 0E 01 4F 3F FC 08 10 18 10 06 10 16 10 28 10 |
| HDMI2 | 78 03 0C 00 20 00 80 2D 20 C0 0E 01 4F 3F FC 08 10 18 10 06 10 16 10 28 10 |
| HDMI3 | 78 03 0C 00 30 00 80 2D 20 C0 0E 01 4F 3F FC 08 10 18 10 06 10 16 10 28 10 |
| HDMI4 | 78 03 0C 00 40 00 80 2D 20 C0 0E 01 4F 3F FC 08 10 18 10 06 10 16 10 28 10 |

g. Colorimetry Data Block(HDMI)

- The Model not supporting XvYcc(Except for LM7600)

| INPUT | MODEL NAME(HEX) |
|-------|-----------------|
| HDMI1 | E3 05 00 00 |
| HDMI2 | E3 05 00 00 |
| HDMI3 | E3 05 00 00 |
| HDMI4 | E3 05 00 00 |

4.2. White Balance Adjustment

4.2.1. Overview

- W/B adj. Objective & How-it-works
 - (1) Objective: To reduce each Panel's W/B deviation
 - (2) How-it-works : When R/G/B gain in the OSD is at 192, it means the panel is at its Full Dynamic Range. In order to prevent saturation of Full Dynamic range and data, one of R/G/B is fixed at 192, and the other two is lowered to find the desired value.
 - (3) Adjustment condition : normal temperature
 - 1) Surrounding Temperature : 25 °C ± 5 °C
 - 2) Warm-up time: About 5 Min
 - 3) Surrounding Humidity : 20 % ~ 80 %

4.2.2. Equipment

- (1) Color Analyzer: CA-210 (LED Module : CH 14)
- (2) Adjustment Computer(During auto adj., RS-232C protocol is needed)
- (3) Adjustment Remote control
- (4) Video Signal Generator MSPG-925F 720p/204-Gray (Model: 217, Pattern: 49)
 - > Only when internal pattern is not available
- Color Analyzer Matrix should be calibrated using CS-100.

4.2.3. Equipment connection MAP

4.2.4. Adj. Command (Protocol)

<Command Format>

| | | | | | | | | | | | | | | | | |
|-------|----|---|----|---|-----|---|----|---|-----|---|----|---|-----|---|----|------|
| START | 6E | A | 50 | A | LEN | A | 03 | A | CMD | A | 00 | A | VAL | A | CS | STOP |
|-------|----|---|----|---|-----|---|----|---|-----|---|----|---|-----|---|----|------|

- LEN: Number of Data Byte to be sent
 - CMD: Command
 - VAL: FOS Data value
 - CS: Checksum of sent data
 - A: Acknowledge
- Ex) [Send: JA_00_DD] / [Ack: A_00_okDDX]

- RS-232C Command used during auto-adjustment.

| RS-232C COMMAND | | | Explanation |
|-----------------|----|-------|---|
| [CMD] | ID | DATA] | |
| wb | 00 | 00 | Begin White Balance adjustment |
| wb | 00 | 10 | Gain adjustment(internal white pattern) |
| wb | 00 | 1f | Gain adjustment completed |
| wb | 00 | 20 | Offset adjustment(internal white pattern) |
| wb | 00 | 2f | Offset adjustment completed |
| wb | 00 | ff | End White Balance adjustment (internal pattern disappears) |

Ex) wb 00 00 -> Begin white balance auto-adj.
 wb 00 10 -> Gain adj.
 ja 00 ff -> Adj. data
 jb 00 c0
 ...
 ...
 wb 00 1f → Gain adj. completed
 *(wb 00 20(Start), wb 00 2f(end)) → Off-set adj.
 wb 00 ff → End white balance auto-adj.

- Adj. Map

| | Adj. item | Command (lower caseASCII) | | Data Range (Hex.) | | Default (Decimal) |
|--------|-----------|---------------------------|------|-------------------|-----|-------------------|
| | | CMD1 | CMD2 | MIN | MAX | |
| Cool | R Gain | j | g | 00 | C0 | |
| | G Gain | j | h | 00 | C0 | |
| | B Gain | j | i | 00 | C0 | |
| | R Cut | | | | | |
| | G Cut | | | | | |
| | B Cut | | | | | |
| Medium | R Gain | j | a | 00 | C0 | |
| | G Gain | j | b | 00 | C0 | |
| | B Gain | j | c | 00 | C0 | |
| | R Cut | | | | | |
| | G Cut | | | | | |
| | B Cut | | | | | |
| Warm | R Gain | j | d | 00 | C0 | |
| | G Gain | j | e | 00 | C0 | |
| | B Gain | j | f | 00 | C0 | |
| | R Cut | | | | | |
| | G Cut | | | | | |
| | B Cut | | | | | |

4.2.5. Adj. method

- (1) Auto adj. method

- 1) Set TV in adj. mode using P-Only key.
- 2) Zero calibrate probe then place it on the center of the Display.
- 3) Connect Cable.(RS-232C to USB)
- 4) Select mode in adj. Program and begin adj.
- 5) When adj. is complete (OK Sign), check adj. status pre mode. (Warm, Medium, Cool)
- 6) Remove probe and RS-232C cable to complete adj.
- W/B Adj. must begin as start command "wb 00 00" , and finish as end command "wb 00 ff", and Adj. offset if need.

- (2) Manual adjustment. method

- 1) Set TV in Adj. mode using P-Only key.
- 2) Zero Calibrate the probe of Color Analyzer, then place it on the center of LCD module within 10 cm of the surface.
- 3) Press ADJ key → EZ adjust using adj. R/C → 7. White-Balance then press the cursor to the right(key ►). (When right key(►) is pressed 216 Gray internal pattern will be displayed)
- 4) One of R Gain / G Gain / B Gain should be fixed at 192, and the rest will be lowered to meet the desired value.
- 5) Adjustment is performed in COOL, MEDIUM, WARM 3 modes of color temperature.
 - If internal pattern is not available, use RF input. In EZ Adj. menu 7.White Balance, you can select one of 2 Test-pattern: ON, OFF. Default is inner(ON). By selecting OFF, you can adjust using RF signal in 216 Gray pattern.

- Adjustment condition and cautionary items
 - 1) Lighting condition in surrounding area
Surrounding lighting should be lower 10 lux. Try to isolate adj. area into dark surrounding.
 - 2) Probe location
: Color Analyzer(CA-210) probe should be within 10 cm and perpendicular of the module surface.(80° ~ 100°)
 - 3) Aging time
 - After Aging Start, Keep the Power ON status during 5 Minutes.
 - In case of LCD, Back-light on should be checked using no signal or Full-white pattern.

4.2.6. Reference(White balance adjustment coordinate and color temperature)

- Luminance : 204 Gray
- Standard color coordinate and temperature using CS-1000 (over 26 inch)

| Mode | Coordinate | | Temp | Δuv |
|--------|------------|-------|---------|-------------|
| | x | y | | |
| Cool | 0.269 | 0.273 | 13000 K | 0.0000 |
| Medium | 0.285 | 0.293 | 9300 K | 0.0000 |
| Warm | 0.313 | 0.329 | 6500 K | 0.0000 |

- Standard color coordinate and temperature using CA-210(CH 14)

| Mode | Coordinate | | Temp | Δuv |
|--------|---------------|---------------|---------|-------------|
| | x | y | | |
| Cool | 0.269 ± 0.002 | 0.273 ± 0.002 | 13000 K | 0.0000 |
| Medium | 0.285 ± 0.002 | 0.293 ± 0.002 | 9300 K | 0.0000 |
| Warm | 0.313 ± 0.002 | 0.329 ± 0.002 | 6500 K | 0.0000 |

4.2.7. LED White balance table

- EDGE LED module change color coordinate because of aging time.
- Apply under the color coordinate table, for compensated aging time.
- LM76/67/66 series

| GP4 | Aging time (Min) | Cool | | Medium | | Warm | |
|-----|------------------|------|-----|--------|-----|------|-----|
| | | X | y | x | y | x | y |
| | | 269 | 273 | 285 | 293 | 313 | 329 |
| 1 | 0-2 | 283 | 293 | 299 | 313 | 320 | 339 |
| 2 | 3-5 | 282 | 291 | 298 | 311 | 319 | 337 |
| 3 | 6-9 | 281 | 290 | 297 | 310 | 318 | 336 |
| 4 | 10-19 | 279 | 289 | 295 | 309 | 316 | 335 |
| 5 | 20-35 | 277 | 284 | 293 | 304 | 314 | 330 |
| 6 | 36-49 | 274 | 279 | 290 | 299 | 311 | 325 |
| 7 | 50-79 | 271 | 277 | 287 | 297 | 308 | 323 |

4.3. EYE-Q function check

- (1) Turn on TV.
- (2) Press EYE key of Adjustment remote control.
- (3) Cover the Eye Q II sensor on the front of the using your hand and wait for 6 seconds.
- (4) Confirm that R/G/B value is lower than 10 of the "Raw Data (Sensor data, Back light)". If after 6 seconds, R/G/B value is not lower than 10, replace Eye Q II sensor.
- (5) Remove your hand from the Eye Q II sensor and wait for 6 seconds.
- (6) Confirm that "ok" pop up. If change is not seen, replace Eye Q II sensor.

4.4. Local Dimming Function Check

- Step 1) Turn on TV.
- Step 2) Press "TILT" key on the Adj. R/C.
- Step 3) At the Local Dimming mode, module Edge Backlight moving right to left Back light of IOP module moving.
- Step 4) Confirm the Local Dimming mode.
- Step 5) Press "exit" key.

4.5. Magic Motion Remote control test

- (1) Equipment : RF Remote control for test, IR-KEY-Code Remote control for test
- (2) You must confirm the battery power of RF-Remote control before test(recommend that change the battery per every lot)
- (3) Sequence (test)
 - 1) if you select the "Start(Wheel)" key on the Adjustment remote control, you can pairing with the TV SET.
 - 2) You can check the cursor on the TV Screen, when select the "Wheel" key on the Adjustment remote control.
 - 3) You must remove the pairing with the TV Set by select "Mute" key on the Adjustment remote control

4.6. 3D function test

(Pattern Generator MSHG-600, MSPG-6100[Support HDMI1.4])

* HDMI mode NO. 872 , pattern No.83

(1) Please input 3D test pattern like below.

(2) When 3D OSD appear automatically, then select OK key.

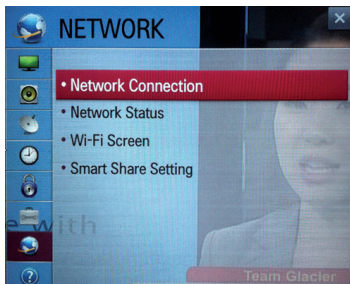

(3) Don't wear a 3D Glasses, check the picture like below.

4.7. Wi-Fi Test

Step 1) Turn on TV

Step 2) Select Network Connection option in Network Menu.

Step 3) Select Start Connection button in Network Connection.

Step 4) If the system finds any AP like blow PIC, it is working well.

4.8. LNB voltage and 22KHz tone check

(only for DVB-S/S2 model)

▪ Test method

- (1) Set TV in Adj. mode using POWER ON.
- (2) Connect cable between satellite ANT and test JIG.
- (3) Press Yellow key(ETC+SWAP) in Adj Remote control to make LNB on.
- (4) Check LED light 'ON' at 18 V menu.
- (5) Check LED light 'ON' at 22 KHz tone menu.
- (6) Press Blue key(ETC+PIP INPUT) in Adj Remote control to make LNB off.
- (7) Check LED light 'OFF' at 18 V menu.
- (8) Check LED light 'OFF' at 22 KHz tone menu.

▪ Test result

- (1) After press LNB On key, '18 V LED' and '22 KHz tone LED' should be ON.
- (2) After press LNB OFF key, '18 V LED' and '22 KHz tone LED' should be OFF.

4.9. Option selection per country

4.9.1. Overview

- Option selection is only done for models in Non-EU

4.9.2. Method

- (1) Press ADJ key on the Adj. R/C, then select Country Group Meun
- (2) Depending on destination, select Country Group Code 04 or Country Group EU then on the lower Country option, select US, CA, MX. Selection is done using +, - or ►◄ key.

4.10. Tool Option selection

▪ Method : Press "ADJ" key on the Adjustment remote control, then select Tool option.

4.11. Ship-out mode check(In-stop)

▪ After final inspection, press "IN-STOP" key of the Adjustment remote control and check that the unit goes to Stand-by mode.

4.12. GND and Internal Pressure check

4.12.1. Method

- (1) GND & Internal Pressure auto-check preparation
 - Check that Power cord is fully inserted to the SET.
(If loose, re-insert)
- (2) Perform GND & Internal Pressure auto-check
 - Unit fully inserted Power cord, Antenna cable and A/V arrive to the auto-check process.
 - Connect D-terminal to AV JACK TESTER
 - Auto CONTROLLER(GWS103-4) ON
 - Perform GND TEST
 - If NG, Buzzer will sound to inform the operator.
 - If OK, changeover to I/P check automatically.
(Remove CORD, A/V form AV JACK BOX.)
 - Perform I/P test
 - If NG, Buzzer will sound to inform the operator.
 - If OK, Good lamp will lit up and the stopper will allow the pallet to move on to next process.

4.12.2. Checkpoint

- TEST voltage
 - GND: 1.5 KV / min at 100 mA
 - SIGNAL: 3 KV / min at 100 mA
- TEST time: 1 second
- TEST POINT
 - GND TEST = POWER CORD GND & SIGNAL CABLE METAL GND
 - Internal Pressure TEST = POWER CORD GND & LIVE & NEUTRAL
- LEAKAGE CURRENT: At 0.5 mArms

5. Audio

| No. | Item | Min | Typ | Max | Unit | Remark |
|-----|---|-----|------|------|------|--------------------------------------|
| 1. | Audio practical max Output, L/R (Distortion=10% max Output) | 9 | 10 | 12 | W | EQ Off AVL Off Clear Voice Off |
| | | | 8.10 | 10.8 | Vrms | |
| 2. | Speaker (8Ω Impedance) | 9 | 10 | 12 | W | EQ Off AVL Off Clear Voice Off |

Measurement condition:

- (1) RF input: Mono, 1 KHz sine wave signal, 100 % Modulation
- (2) CVBS, Component: 1 KHz sine wave signal 0.5 Vrms
- (3) RGB PC: 1 KHz sine wave signal 0.7 Vrms

6. USB S/W Download(Service only)

- (1) Put the USB Stick to the USB socket.
- (2) Automatically detecting update file in USB Stick.
 - If your downloaded program version in USB Stick is Low, it didn't work. But your downloaded version is High, USB data is automatically detecting.
(Download Version High & Power only mode, Set is automatically Download)
- (3) Show the message "Copying files from memory".

- (4) Updating is starting.

- (5) Updating Completed, The TV will restart automatically.
 - (6) If your TV is turned on, check your updated version and Tool option. (explain the Tool option, next stage)
- * If downloading version is more high than your TV have, TV can lost all channel data. In this case, you have to channel recover. if all channel data is cleared, you didn't have a DTV/ATV test on production line.

* After downloading, have to adjust Tool Option again.

- (1) Push "IN-START" key in service remote control.
- (2) Select "Tool Option 1" and push "OK" key.
- (3) Punch in the number. (Each model has their number)

SCREW ASSEMBLY WORKING GUIDE

■ Screw specification and application situation

<Warning>

Check Screw Type When Screw is assembled at 'A' Part. If 'C' Screw is used at the 'A' part, Module will get damaged.

BLOCK DIAGRAM

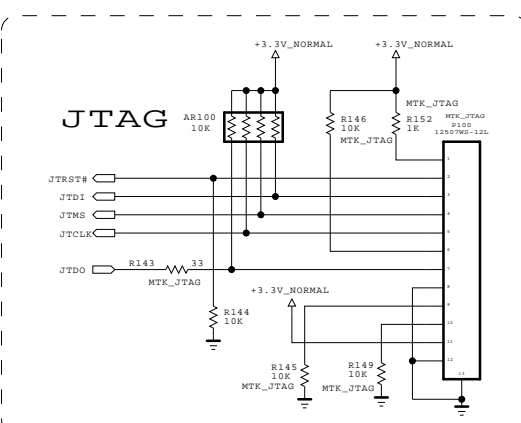

EXPLODED VIEW

IMPORTANT SAFETY NOTICE

Many electrical and mechanical parts in this chassis have special safety-related characteristics. These parts are identified by in the Schematic Diagram and EXPLODED VIEW. It is essential that these special safety parts should be replaced with the same components as recommended in this manual to prevent X-RADIATION, Shock, Fire, or other Hazards. Do not modify the original design without permission of manufacturer.

The diagram shows two parallel signal paths, PC_L and PC_R, connected to a common load. Each path starts with a 4100Ω resistor in series with a 4700 pF capacitor to ground. This is followed by a 100Ω resistor in series with a 100 pF capacitor to ground. The outputs of these paths are labeled PC_L_180 and PC_R_180. A dashed box encloses the common load, which consists of a 160Ω resistor in series with a 100 pF capacitor to ground. The load is connected to the outputs of both paths via 100Ω resistors.

New features

Main PCBs

Block Diagrams, IIC Map

Structure of TV set and connection of sub ass'ys

New sub ass'ys

- Instruction of new sub ass'ys
- How to use tool
- Download

Adjust way of new features (widevine...)

Repair guide

The latest issue and concerning issue

EPI Interface

EPI(Embedded Point-Point Interface)

Features

- Point-Point topology (support 2 Pair option)
- CDR (Clock Data Recovery)
- Bandwidth up to 1.85Gbps/pair at FHD 120Hz 10 bit application
- Lock signal cascading and feedback to T-Con
- Embedded Control Data

Merits

- Better reliability on common noise
- No data skew and better EMI margin
- Fewer lines than mini-LVDS
- Slim PCB design

Figure1. Topology

Table 1. Example of FHD 120Hz TV

| EPI | FHD (10bit) @ 960Ch | | |
|-------------------|---------------------|----------|----------|
| | 60Hz | 120Hz | 240Hz |
| Transmission Line | 12 | 12 | 24 |
| Bandwidth | 0.84Gbps | 1.68Gbps | 1.68Gbps |

EPI Interface (mini-LVDS vs. EPI)

Comparison

HF mini-LVDS

| HF mini-LVDS | FHD (10bit) | | |
|---------------|-------------|-------------|-------------|
| | 60Hz | 120Hz | 240Hz |
| No. of Signal | 36 | 36 | 72 |
| Connector | 60pin (2ea) | 60pin (2ea) | 80pin (2ea) |

- Difficult to upgrade bandwidth limit
- Multiple number of wires needed for higher bandwidth

EPI (Embedded clock P-to-P Interface)

| EPI | FHD (10bit) | | |
|---------------|---------------|----------------|----------------|
| | 60Hz 960ch | 120Hz 960ch | 240Hz 720ch |
| No. of Signal | 12 | 12 | 32 |
| Connector | - | 50 pin (2ea) | 70pin (2ea) |

- Better reliability on common noise
- No data skew. Better EMI margin
- Lower cost (Cable, Connector)
- Slim S-PCB design (14mm → 10mm) helps slimmer TV

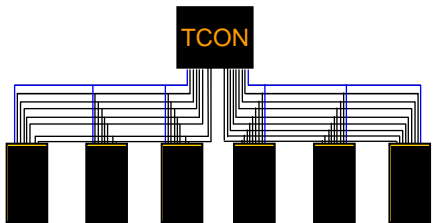

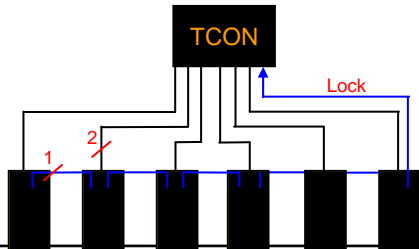

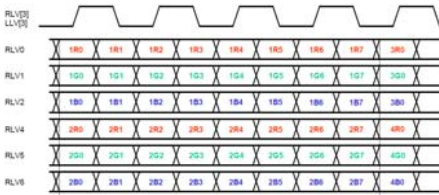

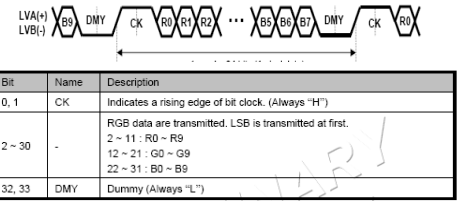

What to change

LCM (T-con to S-Driver IC)

- * Bandwidth Capability
- FHD 120Hz 10Bit : 594Mbps@36Lines → 1.65Gbps@12Lines
 - FHD 240Hz 10Bit : 594Mbps@72Lines → 1.25Gbps@32Lines

EPI Interface (mini-LVDS vs. EPI)

| | HF mini-LVDS | EPI | | | | | | | | | | | | |
|----------------------------|--|--|-----|------|-------------|------|----|--|--------|---|--|--------|-----|--------------------|

2012Y IR + Soft Touch LED Lighting Scenario

Power LED Scenario

| 구분 | | | Spec 내용 | 비고 |
|--|----------------------|--------------------------------|--|-----------------|
| Power Indicator UI | | | <ul style="list-style-type: none"> - 12Y GP4 High(L9), GP4 Mid(MTK), GP4 Low(S7LR2) → “Power Light” UI Delete compared with 11Y(GP3 model) - 11Y Carry Over Model : 12Y same Power LED scenario process → “Power Light “ UI Delete, The way of 11Y Soft Touch Ass'y is used. White LED Disable | - |
| GP4 (High/Mid/Low) Power LED Scenario | User Condition | Power On | <ul style="list-style-type: none"> - Stand-By condition to Red LED On : After DC ON, Red LED light Blinks twice and then Red LED is Off - Stand-By condition to Red LED Off : After DC ON, Red LED light Blinks three times and then Red LED is Off | - |
| | | Power Off | <ul style="list-style-type: none"> - Without Blink, Red LED On immediately But, If the mode of Power Indicator UI is Stand-By, keep staying Red LED Off status | - |
| | | Remote Key input | <ul style="list-style-type: none"> - When you put the remote Control button, Red LED Blinks once | - |
| | | Warm Stand-by | <ul style="list-style-type: none"> - Red LED On stays and In the case of Set On, Red LED turns Off → Including DVR Ready model, Japanese model | Same as the 11Y |
| | | 3D mode | <ul style="list-style-type: none"> - Red LED Off (Power On condition is identical) | Same as the 11Y |
| | Factory Condition | Factory Default Mode (In-Stop) | <ul style="list-style-type: none"> - 12Y LED Model : Stand-By On (Red LED On) - 12Y CCFL Model : Stand-By On (Red LED On) - 11Y Carry Over Model (CS5XX/CM5XX) : Stand-By On (Red LED On) - After In-Stop, Red LED On is processed and after In-Stop, Red LED turns on within 3 sec | - |
| | | Power Only Mode | <ul style="list-style-type: none"> - In the case of Power Only On, Red LED turns Off - In the case of DC Off, Red LED turns On | - |

Introductions of GP4 Sensor (Touch IC)

Manual of Touch Sensitivity

1. Verify the number of THR at first.

2. Once you correctly touch Touch button for more than 1 sec, you can see a Touch data while you keep touching the button.

3. Keep in mind that you can only read the Touch data during touch status.

4. It doesn't matter that Touch data gets low value after taking off your finger.

Touch Key Threshold Level (Ta = 25°C)

F F Set

1. Write all of the address, value (Hex) as a below, capable of only Touch.txt file based on the left picture

2. Make the file [Filename : 'Touch.txt'] and move it to USB (The outermost area, Don't move it to any folder)

3. Connect USB to TV and press button 'ADJ menu' and then choose the 'touch sensitivity setting'

4. Press button 'SIMPLINK (Simply Link key)' and then you can see the OK Pop up.

5. After that, you check it the IR LED version on In-start menu and verify it that the number of version is changed to what you want.

Introductions of 12Y RF ass'y + Magic Remote control

1. System

❖ **Pairing Information Transmission (Send to TV after Paired)**

- Static Calibration Data (Bypass only)
- Remote FW ver. (Save also in Receiver)
- BD_ADDR (Save also in Receiver)

• **Pairing Information Transmission Sequence**

- When it is paired, the remote sends packets(pairing success, F/W version, BD_ADDR) to the receiver.
- The receiver sends the pairing success packet to TV directly.
- F/W version and BD_ADDR packets are just saved on the receiver.
- The receiver sends F/W version or BD_ADDR packet to TV when it is required.

❖ **Motion Data Transmission**

- Period : 7.5msec
- Motion Data : gyro, accelerometer

❖ **Voice Data Transmission**

- Period : 10msec
- Voice sampling : 16khz 16bit

→ See “6-2. Packets” on page 8.

2. Remote Buttons (M3 vs. M4)

M3 Remote

M4 Remote

| BUTTON | | RF Unpaired IR_CODE | RF Paired RF_CODE | IR continuous repeat | ETC. |

64-QAM@48/54Mbps and above

- ◆ Current consumption(5V DC):

Full load: 430mA

- ◆ Operating Temperature: 0 ~ 60 °C ambient

- ◆ Storage Temperature: -20 ~ 60 °C ambient

- ◆ Humidity: under 85% and must be non-condensing

- ◆ Regulation and certification compliance available:

- ◆ CE

- ◆ FCC

- ◆ WiFi

- ◆ WPS

12Y Widevine & HDCP 2.0 & NETFLIX

- 1. Widevine?**
- 2. HDCP 2.0 & NETFLIX?**
- 3. DTCP?**
- 4. Changed BOM**

1. Widevine?

[Widevine]

Widevine is the Solution/Library offering Adaptive Streaming and DRM.

In BBTv, when special CP do service, this module is required key.

Currently CP which is requested to widevine, is typically Australian Bigpond Live and North American CinemaNow.

Furthermore, because the future will be the spread of CP, widevine key download for the global model should be applied to production.

(Because operation unique key should be downloaded for Widevine , Widevine key download by NSU is impossible.)

[Widevine Key]

Widevine Key is unique data stored TV for using Widevine.

2. HDCP 2.0 & NETFLIX?

☐ HDCP

- ✓ High-bandwidth Digital Content Protection
- ✓ Protect high-value digital motion pictures, television programs and audio against unauthorized interception and copying between a digital set top box or digital video recorder and a digital TV or PC.
- ✓ Specification developed by Intel Corporation to protect digital entertainment across the DVI/HDMI interface.

☐ Why HDCP2.0?

- ✓ HDCP revision 2.0 supports a broader range of wired and **wireless** interfaces.

☐ Netflix

- ✓ the services maintain a huge selection of movies and latest releases and offer DVD rentals via mail & online streaming.

3. DTCP?

[DTCP]

The Digital Transmission Content Protection Specification defines a cryptographic protocol for protecting audio/video entertainment content from unauthorized copying, intercepting, and tampering as it traverses digital transmission mechanisms such as a high-performance serial bus that conforms to the IEEE 1394-1995 standard. Only legitimate entertainment content delivered to a source device via another approved copy protection system (such as the DVD Content Scrambling System) will be protected by this protection system.

[Three cryptographic Keys]

- Authentication Key which is formed as a result of authentication and used to protect the exchange keys.
- Exchange Key which is used to set up and protect content streams.
- Content Key which is used to encrypt the content being exchanged.

①

③

Checking order when there is no audio

① Check the contact condition of or 24V connector of Main Board

② Measure the 24V input voltage supplied from Power Board
(If there is no input voltage, remove and check the connector)

③ Connect the tester RX1 to the speaker terminal and if you hear the Chik Chik sound when you touch the GND and output terminal, the speaker is normal.
